

Appeal autumn 2020 –

Discover Zimbabwe trains community groups on the importance of preserving locally available medicinal plants, nutrition and good hygiene. Discover Zimbabwe also works with many schools, planting indigenous fruit trees. In Zimbabwe, the corona virus is out of control. Under the leadership of Joachem Nyamande, Discover Zimbabwe has produced a tincture based on *Artemisia annua* and the “resurrection plant”, which is proving effective against COVID-19 symptoms. Given the lack of effective government action, academics and a former national health minister are urging Discover Zimbabwe to register their products, so that they can be more widely distributed and used throughout the country. For the registration of five products we are seeking £1500 or 2000USD.

One of the carpentry trainees

Obaikol Gideon in Soroti, Uganda, and his group “**Angicunak Luko Teso**” are planting trees (mainly jackfruit), training street kids in carpentry so that they can stand on their own feet and constructing solar driers which local farmers use to produce cassava chips, which fetch a good price on the market. The group urgently needs £1000 to continue and extend this programme, which is making a useful contribution to local employment.

National training in Uganda – in the Kasasa community.

During the last week of November, we hope to be able to run a comprehensive week-long training seminar in organic gardening and natural healthcare. This will be held in the new training facility Rehema Namyalo is (as a result of the support of many generous donors) constructing in Kasasa. To train 20 members of the community we are seeking £2000. Sponsored participants from other areas of Uganda are welcome to attend for a fee of £250.

Judith Nambi is a primary school headteacher in Uganda and Discover trainer. She is training children and adults in tree planting and natural health care, including refugees from the now closed Sango Bay camp. She needs £1000 for training materials including seedlings, transport and food. Watch this [short video](#) of young children performing a drama in preparation for their training.
